WORK EXPERIENCE

Work 3

IT Company: Evoplay
Date: since 05.2025
Project: Evoplay
Position: QA Engineer

Responsibilities:

- Perform manual testing of web and mobile casino games, including functional, regression, smoke, and sanity testing.
- Create and maintain test cases and checklists based on requirements and game specifications.
- Report and track defects in Jira, ensuring clear reproduction steps and proper prioritization.
- Conduct API testing using Postman (REST, JSON, HTTP methods, status codes).
- Collaborate with developers, designers, and product managers within an Agile/Scrum environment.

Work 2

IT Company: MLSDev
Date: 07.2019 - 07.2024
Project: Gopuff
Position: QA Engineer

Responsibilities:

- Conducted manual testing for Web, iOS, and Android apps, ensuring stable releases.
- Created and maintained test documentation (cases, checklists, reports, plans).
- Executed and maintained automation tests (Cucumber, Selenium IDE).
- Performed API testing using Postman and Swagger.
- Analyzed logs (Android, server) to identify and verify bugs.
- Collaborated closely with developers and product managers to ensure high-quality features.
- Tested push notifications, deep links, and mobile functionality using ADB

Work 1

IT Company: Gemicle
Date: 08.2018 - 07.2019
Project: CLAP
Position: Software &
Hardware QA Engineer

Responsibilities:

- Performed black-box and gray-box testing of IoT devices and firmware.
- Analyzed requirements and product documentation for a Smart Home (IoT) system
- Designed and maintained test cases, test scenarios, and checklists
- Performed manual testing (functional, regression, smoke) for web and mobile applications
- Identified, reported, and tracked defects using Jira
- Verified bug fixes and conducted re-testing across multiple environments
- Collaborated closely with developers, QA team, and product stakeholders to ensure product quality
